

BIRLA INSTITUTE OF TECHNOLOGY
MESRA, RANCHI

PANTHEON 2017

BROCHURE

13th to 15th October

About BIT

60 years of edification, of par excellence, of philanthropically providing the country and the world with some of the best engineers of all times, our hallowed institution, Birla Institute of Technology is the upshot of the vision of Mr. B.M Birla, a man of great acclaim, a visionary and an industrialist!

Established in 1955, Birla Institute of Technology, Mesra, is a premier-star rated and one of the most applauded colleges in the country!

Introduction

In its endeavour to provide a national platform for the youth to showcase their technical skills; displaying cutting-edge technology and broadcast the supernova of technological grandeurs, Birla Institute of Technology, Mesra is conducting its Annual Technical Fest-
Pantheon!

The much awaited technical extravaganza is on the horizon, but this time it will be much bigger and better! This October 13th-15th, Ranchi will be lifted off its feet when technical geniuses boost out their skills in mind boggling competitions. The fest aims to allow the students to explore the engineer within themselves by giving them a chance to participate in numerous comprehensive events and competitions. Various technical events are organised, which are based on engineering streams like robotics, coding, electronics, mechanics, construction and manufacturing, which will be helping the budding engineers to prove their mettle and emerge victorious. Apart from the technical competitions, various fun-filled activities will also be conducted which include gaming events, hardware presentations, quizzes, debates and workshops which will be a delightful treat and shall also provide an intellectual platform. Informative guest lecturers, from eminent personalities will also be organised to help students formulate a view about how to shape their career and progress in their lives. The cultural nights which include Dance, Drama, Music and Fugiya night will serve as a medium for the students to relax and rejuvenate after a highly competitive day, and will also help them to showcase their cultural expertise. With a myriad of brainstorming events to keep you occupied, it's time to explore the engineer within you and Shine away with Science!

Social Cause: Depression

“Broken Hearts

Broken Souls

Lost desires

Withered hopes”

These four phrases describe our generation in the most adroit and dexterous manner possible. Happiness is losing its sheen and sorrow is becoming the new cool. With people posting status updates full of grief and despair, the true meaning of sorrow is getting lost in the process of Social Media gloating. Although this pompous show of sadness does help in gaining popularity, it has a detrimental effect on the people who are actually sad, people who are struggling with the modern epidemic called Depression. While the value of Depression is being nullified by our generation, the older generation attaches a lot of negative value to it. For them, there is a taboo attached to Depression and it is considered as something horrendous and shaming by them. With everyone around them either belittling or bombasting this medicinal disease, people suffering from depression often find themselves alone. And depression thrives on loneliness. It grows slyly and due to the fear of social acceptance, people tend to stay quiet. While we kill most of the diseases by killing their source of energy, we end up giving Depression what it needs by leaving the sufferer lonely and abandoned. Well, we at Pantheon, BIT Mesra believe that this needs to change. We believe that Depression should be treated like every other disease. We believe in talking about it, freely and shamelessly. We believe that a small step can make a big difference if your intentions are right. And most importantly, we believe in the power of humanity and compassion. That is why, the social cause of Pantheon this time around is 'Depression'. This is Pantheon 2017 and it is bigger, bolder and better than before.

Social Awareness: Thalassemia

Thalassemia is a group of blood disorders passed from parents to children through genes. A person who has thalassemia makes fewer healthy red blood cells. Their red blood cells do not produce enough haemoglobin, the protein that carries oxygen throughout the body. Thalassemia is a treatable disorder but can be hard on one's pocket.

Now more than ever, it is critical to promote understanding of thalassemia and patients' needs to ensure that children and adults are receiving appropriate care and the support needed to manage their illness, no matter where in the world they are.
